

Dear Customer,

Many thanks for your purchase of the DIP Upsampler.

The DIP Upsampler is now factory preset to 96KHz sampling.

This will allow a good quality DAC to reproduce cleaner pulses, and you will experience better performance in percussion music.

The following diagram shows the improved pulse response with 96kHz sampling.

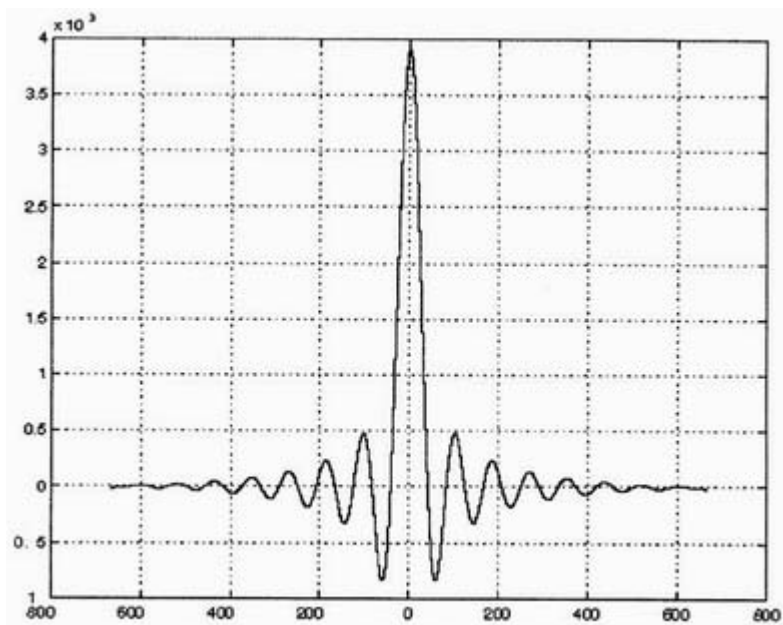

Figure 1. Impulse Response at 48 kHz Sample Rate (X-axis in μsec)

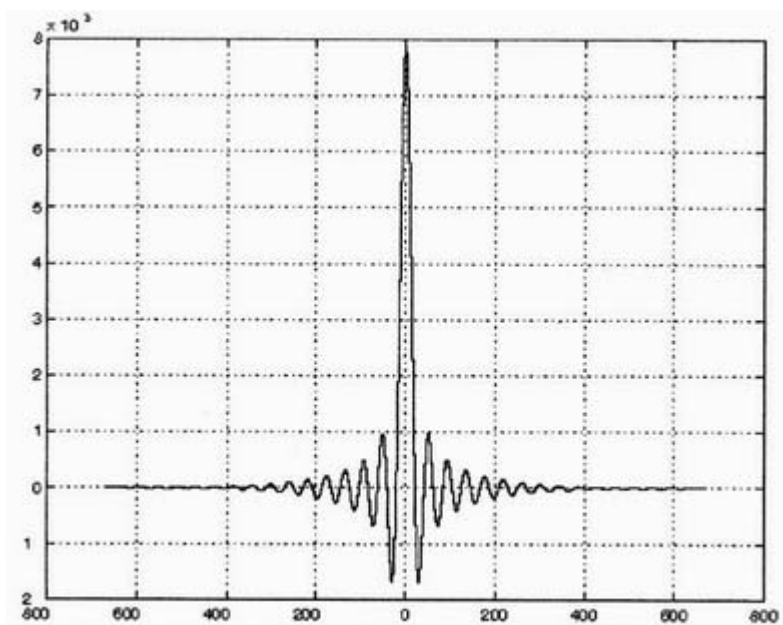

Figure 2. Impulse Response at 96 kHz Sample Rate (X-axis in μsec)
